## ***Because the view matters***

**Display Solutions, Inc. in Hudson, MA** announces that the Business Visual Systems Group has completed the design and installation of an audio/visual (A/V) system in the Council Chambers of the new Citizen's Center in Mount Holly, N.C. Although Display Solutions is best known for visual systems used in simulation and training applications, the Business Group looks for those projects beyond the scope of typical A/V companies.

The Citizen Center was created from an existing late 1880s brick and timber mill building in the town. Using many of the same tools, hardware and techniques from our simulation and training visual systems, Display Solutions incorporated four 50" plasma displays and fixed, remote and hearing impaired audio components. From construction to the interior design, Display Solutions worked with IT Manager Mike Gruno to insure the A/V system was visually and mechanically integrated to meet the needs of the council chamber.

"The level of technical advice, co-operation and flexibility provided to the city by Display Solutions helped us meet the opening meeting scheduled for the new facility" said City Manager Eric Davis.

Business Visual Systems applications also include system control walls, large area mapping/seismic displays, large audience training and very high-resolution presentations of engineering/CAD information.
